

Collaboration for providing a new personal authentication service for financial institutions

New authentication service to secure compatibility between user-friendliness and a high level of security!

Use cases (examples)

Smartphone app

ATM

Banking office

External affairs

New biometric authentication system utilizing a camera and a microphone included in a device as standard

Cash-card-free authentication linked up with a smartphone

- Seal-free personal authentication and identification
- Authentication for corporate transactions, independent of individuals

- Personal authentication at a customer's site, utilizing a tablet owned by a bank for external affairs

*** In particular, new systems that can be implemented without introducing new authentication equipment are wanted.**
